JOB MARKET PAPER

[The Transparency Tax: Discouraging firm ownership via tax havens in Ecuador](#) (with Bachas, P. and Bajaan, A.)

How can ownership registries be leveraged to raise transparency and curb tax haven usage? We address this question by analyzing Ecuador's business income tax surcharge on firms whose owners are tax havens residents and compare the behavior of baseline haven-owned firms against other foreign-owned firms. The reform induced 12 percent of haven-owned firms to report terminal owners outside havens, with new owners predominantly identified as individuals rather than firms, thereby enhancing beneficial ownership transparency. Exposed firms increase tax payments in Ecuador by 17%, with no discernible effect on payrolls and investment. These findings suggest that pairing a "flashlight" (ownership registry) with a "stick" (tax surcharge) can improve transparency and reduce tax erosion at a limited efficiency cost.
